

Power up: Sammamish

Join the challenge!

PSE is partnering with the City of Sammamish to increase participation in our Green Power program, which matches your electricity use with renewable energy made from wind and solar.

The goal of the city-wide challenge is to enroll 100 new residents and businesses in the program by December 2026. If the goal is reached, PSE will provide the City of Sammamish with \$10,000 toward a new solar panel project on a community building.

Together, we can support local renewable energy sources, reduce emissions, and make progress towards the City's Climate Action Plan targets!

Why join?

- **Clean energy for a brighter future.** Your enrollment helps create a cleaner, more sustainable environment for your children, grandchildren, other families in the community, and all future generations.
- **Reduce dependence on fossil fuels.** By participating, you directly reduce your community's reliance on non-renewable energy sources and contribute to a cleaner environment for all.
- **Lower your carbon footprint.** Your participation reduces your personal greenhouse gas emissions, which also helps make progress on Sammamish's Climate Action Plan.
- **Inspire others.** As a leader in sustainability and environmental stewardship, the City of Sammamish and its residents will set an example for other communities to follow.
- **Community benefits.** If the goal of 100 new enrollments is reached, PSE will provide the City of Sammamish with \$10,000 toward a new solar panel project on a community building. This will support renewable energy generation and reduce operating costs, allowing more resources to be directed toward serving the community of Sammamish.

How to enroll:

Signing up is easy! Simply visit PSE.com/Sammamish to learn more and enroll.

Join today and help Sammamish stay ahead of the curve in the pursuit of a cleaner energy future. Every enrollment brings us one step closer to a cleaner energy future for all.
